

Research work general characteristics

In accordance with the requirements for modern specialists, the student should be ready for constant professional growth, acquire new competencies, have analytical and design skills, have a broad outlook, understand the social essence and importance of the profession, show a steady interest in it and striving for self-improvement and self-education. This is facilitated by the organization of research work of students (NIRS).

The research work of students pursues the following goals:

- to expand and deepen the knowledge of students in the field of theoretical foundations of the disciplines studied, to obtain and develop certain practical skills of independent scientific research activity;
- conduct scientific research to solve urgent problems, put forward by science and practice;
- develop skills to correctly express the results of their own research and the ability to reasonably defend and justify the results;
- to inculcate the skills of users of computers in the conduct of scientific research and processing of the results;
- widely introduce new information technologies in the conduct of research, provide information support for research and support the results.
